

The Faculty of Computer and Information Sciences was established on August 1, 2024, to ensure effective coordination of academic and scientific activities in the field of informatics and artificial intelligence. It was planned to consist of Computer Engineering, Software Engineering, and Artificial Intelligence and Machine Learning departments during the establishment phase.

## **VISION**

The vision of the Faculty of Computer and Information Sciences is to be an education, research and development center that produces pioneering, innovative and sustainable solutions in the rapidly developing world of technology.

**Research and Innovation:** Encouraging innovative research and implementing these research in a way that adds value to society

**Collaboration with Industry:** Establishing strong collaborations with industry and other institutions and organizations to ensure that students work on real-world problems and prepare them for the sector

**Technological Development and Adaptation:** Developing flexible educational curricula and programs that will adapt to rapidly changing technological trends.

**Recognition:** Being a respected faculty recognized internationally in its field.

**Social Contribution:** Providing solutions to social problems through information technologies and computer science and contributing to the general welfare of society by increasing access to technology

**Inclusive:** Creating a rich and inclusive education, training, research and development environment for students and staff from different cultural and academic backgrounds.

## **MISSION**

**Providing Quality Education:** Teaching students the basic principles of computer and information sciences with innovative approaches and equipping them with the knowledge, skills and competencies necessary to become leaders in their fields.

**Encouraging Research and Development:** Encouraging advanced knowledge and technology production in the field of information technologies and computer science by supporting innovative and interdisciplinary research.

**Collaborating with Society and Industry:** Enabling students and academics to work on real-world problems by developing projects that meet the needs of society and industry and creating a bridge between the university and society through these collaborations.

**Providing an Inclusive and Diverse Environment:** Providing a learning and research environment that supports the development of students and faculty from different cultural and academic backgrounds and encourages diversity.

**Continuous Development and Innovation:** Rapidly adapting to changing technologies and social needs by continuously updating and developing educational programs and research projects.

**Developing Ethics and Responsibility Awareness:** Ensuring that students and researchers exhibit a responsible scientific approach in light of ethical values and placing these values at the center of education, research and development activities.
